

Fun in the Sun

Babies under 6 months:

- The two main recommendations from the AAP to prevent sunburn are to avoid sun exposure, and to dress infants in lightweight long pants, long-sleeved shirts, and brimmed hats that shade the neck to prevent sunburn. However, when adequate clothing and shade are not available, parents can apply a minimal amount of sunscreen with at least 15 SPF (sun protection factor) to small areas, such as the infant's face and the **back** of the hands. If an infant gets sunburn, apply cold compresses to the affected area.

For All Other Children:

- The first, and best, line of defense against harmful ultraviolet radiation (UVR) exposure is covering up. Wear a hat with a three-inch brim or a bill facing forward, sunglasses (look for sunglasses that provide 97% -100% protection against both UVA and UVB rays), and cotton clothing with a tight weave.
- Stay in the shade whenever possible, and limit sun exposure during the peak intensity hours - between 10 a.m. and 4 p.m.
- On both sunny and cloudy days use a sunscreen with an SPF of 15 or greater that protects against UVA and UVB rays.
- Be sure to apply enough sunscreen - about one ounce per sitting for a young adult.
- Reapply sunscreen every two hours, or after swimming or sweating.
- Use extra caution near water and sand (and even snow!) as they reflect UV rays and may result in sunburn more quickly.
